Business Storytelling with Data – Sales Performance Analysis

Report :

Insight 1: Sales Target Performance

Observation: The business generated total sales of ₹9,50,100 against the target of ₹10,00,000. This means that 95.01% of the target has been achieved, and only ₹49,900 is remaining.

Interpretation: The business is very close to achieving its expected sales target. This shows that the overall sales performance is good, but a small gap still needs to be covered to reach the target.

Recommendation: The business can try running special offers, promotional campaigns, and customer engagement activities to increase sales and achieve the remaining target.

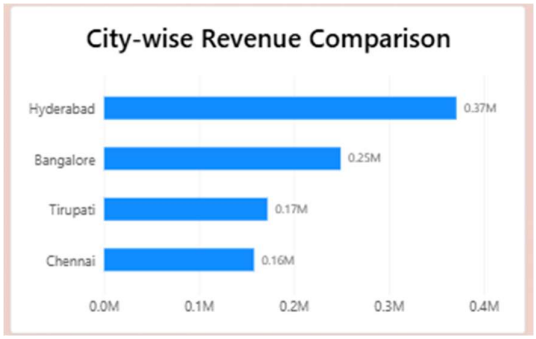

Insight 2: Sales Performance by City

Observation: Hyderabad has generated the highest sales of approximately ₹3.7 lakh, followed by Bangalore with ₹2.5 lakh. Tirupati contributes around ₹1.7 lakh, while Chennai generates approximately ₹1.6 lakh.

Interpretation: Hyderabad and Bangalore are the major revenue-generating cities. Tirupati and Chennai contribute comparatively less to the overall sales. This shows that customer demand and sales performance vary across different locations.

Recommendation: The business should continue maintaining good customer relationships in Hyderabad and Bangalore. At the same time, it can introduce special offers and local marketing campaigns in Tirupati and Chennai to attract more customers and improve sales.

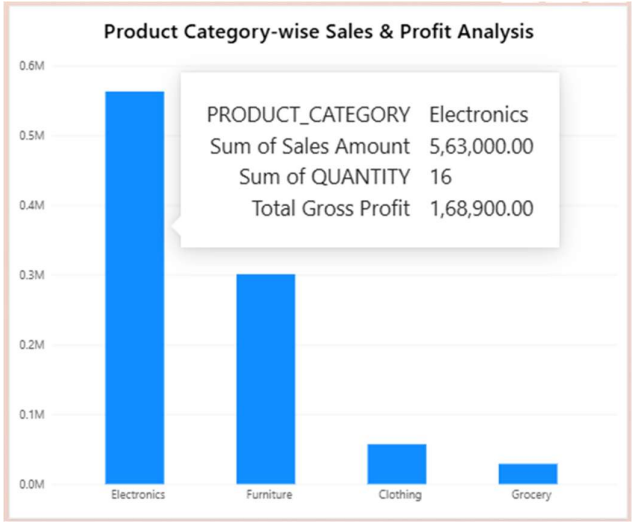

Insight 3: Product Category Performance

Observation: Electronics contributes the highest revenue of approximately ₹5.63 lakh, followed by Furniture with around ₹3.01 lakh. Clothing contributes approximately ₹57,100, while Grocery contributes around ₹19,550.

Interpretation: Electronics and Furniture together contribute more than 90% of the total sales revenue. This shows that these two categories play a major role in the business, while Clothing and Grocery have comparatively smaller contributions.

Recommendation: The business should maintain sufficient stock of Electronics and Furniture products to meet customer demand. It can also introduce discounts, product combinations, and promotional offers for Clothing and Grocery to encourage more purchases.

Insight 4: Monthly Sales Trend

Observation: Sales increased significantly from January to February. During March, sales remained almost stable, while April showed another increase in revenue.

Interpretation: The business experienced good sales growth in February, followed by a period of relatively stable performance in March. The increase in April indicates that sales performance improved again.

Recommendation: The business should analyse the factors that contributed to the increase in February and April. Similar sales strategies, promotional activities, and customer engagement methods can be used in the following months to maintain this growth.

Insight 5: Customer and Order Analysis

Observation: The dashboard shows a total of 40 orders from 40 unique customers. The average order value is approximately ₹23,752.50.

Interpretation: In this dataset, each customer has placed one order. The average order value also indicates that customers are spending a reasonable amount on each transaction. However, there is an opportunity to encourage existing customers to purchase again.

Recommendation: The business can introduce loyalty programs, repeat-purchase offers, and personalized discounts to encourage customers to place more orders. It can also focus on increasing the average order value through product combinations and additional product suggestions.
