DAX Functions

1. SUM() – Total Sales

What it does: Adds all values in an existing column.

```
Total Sales =

SUM(SRINIVAS_SALES[Sales Amount])
```

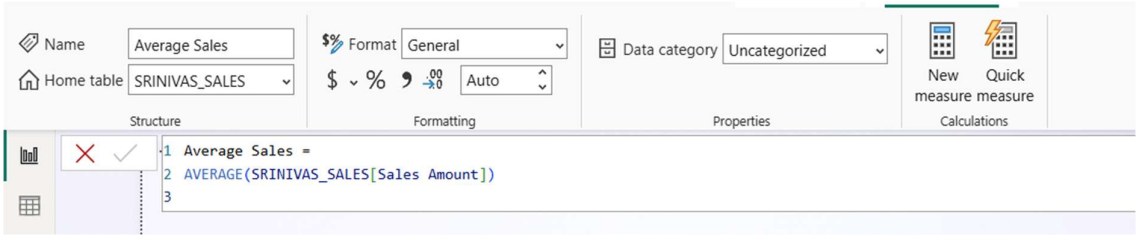

2. AVERAGE() – Average Sales

What it does: Calculates the average value of a numerical column.

```
Average Sales =

AVERAGE(SRINIVAS_SALES[Sales Amount])
```

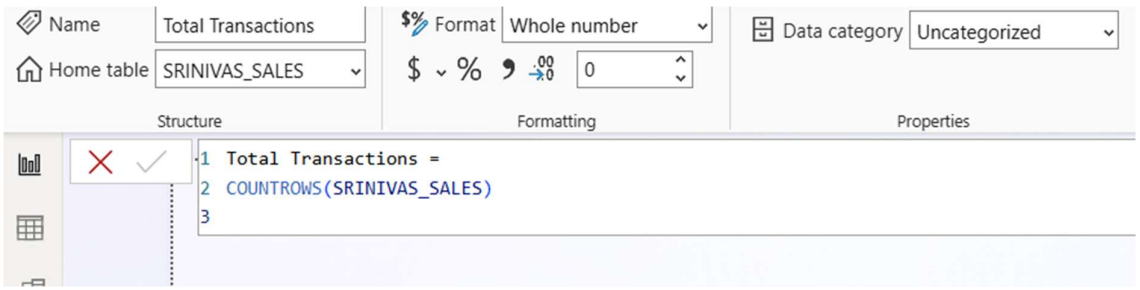

3. COUNTROWS() – Total Transactions

What it does: Counts the total number of rows in a table.

```
Total Transactions =

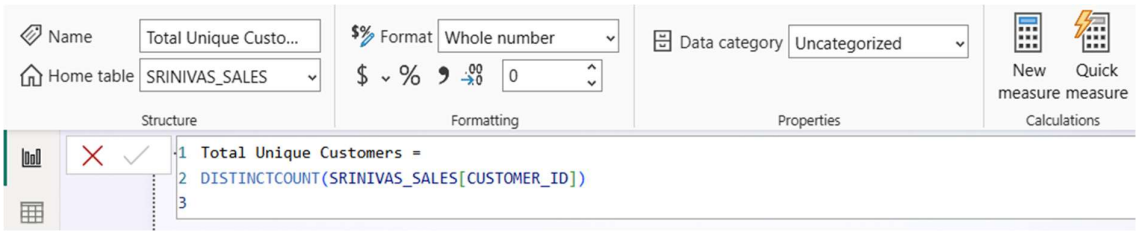

COUNTROWS(SRINIVAS_SALES)
```

4. DISTINCTCOUNT() – Unique Customers

What it does: Counts only unique values in a column.

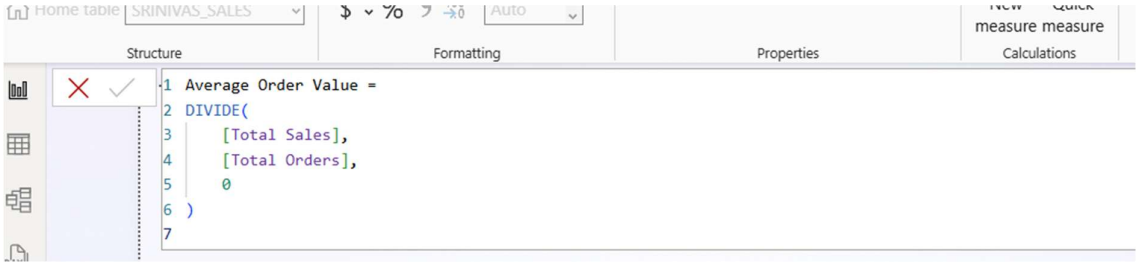

```
Total Unique Customers =
DISTINCTCOUNT(SRINIVAS_SALES[CUSTOMER_ID])
```

5. DIVIDE() – Average Order Value

What it does: Divides one value by another and safely handles division by zero.

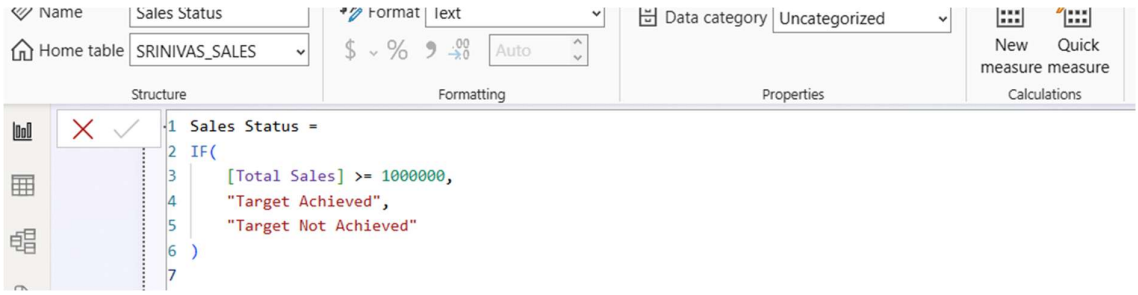

```
Average Order Value =
DIVIDE(
    [Total Sales],
    [Total Orders],
    0
)
```

6. IF() – Sales Target Status

What it does: Checks a condition and returns a result based on whether it is TRUE or FALSE.

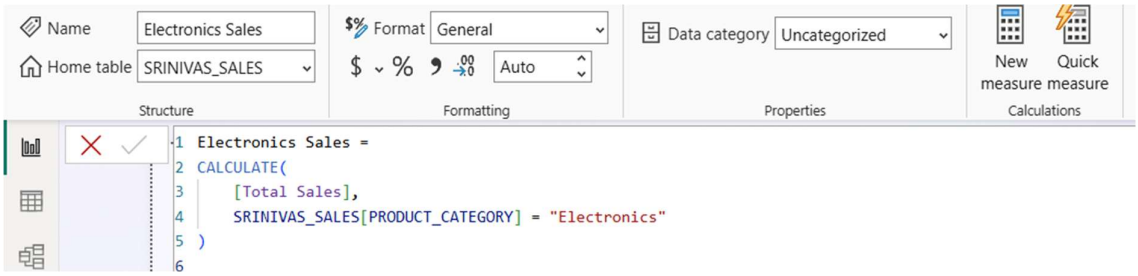

```
Sales Status =
IF(
    [Total Sales] >= 1000000,
    "Target Achieved",
    "Target Not Achieved"
)
```

7. CALCULATE() – Electronics Sales

What it does: Calculates an expression after applying a specified filter condition.

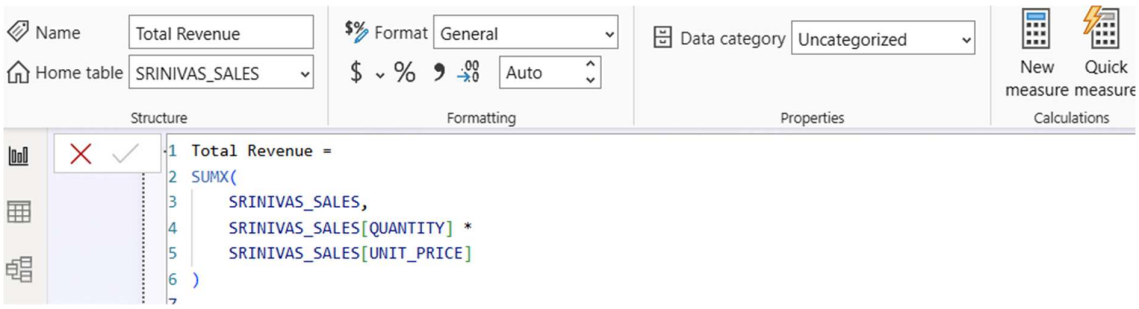

```
Electronics Sales =
CALCULATE(
   [Total Sales],
   SRINIVAS_SALES[PRODUCT_CATEGORY] = "Electronics"
)
```

8. SUMX() – Total Revenue

What it does: Calculates an expression row by row and adds all the results.

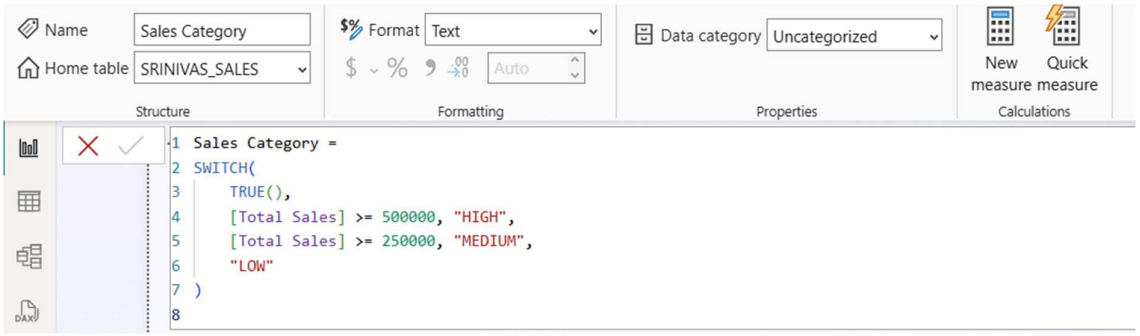

```
Total Revenue =
SUMX(
   SRINIVAS_SALES,
   SRINIVAS_SALES[QUANTITY] *
   SRINIVAS_SALES[UNIT_PRICE]
)
```

9. SWITCH() – Sales Performance Category

What it does: Checks multiple conditions and returns the matching result.

```
Sales Category =
SWITCH(
    TRUE(),
    [Total Sales] >= 500000, "HIGH",
    [Total Sales] >= 250000, "MEDIUM",
    "LOW"
)
```
